

Mr Mike Foley

Bill Gallagher Senior invented in the early 1930's a cunning electrical circuit that delivered a shock whenever his horse Joe used a car as scratching post. This sparked the idea for his electric fence invention and by the end of the 1930 decade, Bill had built his first electric fence and had made a long term commitment to building a great business that redefined what's possible for its customers – Gallagher, the great New Zealand invention. In 1962, Bill Senior's son Bill Junior started working on the Gallagher shop floor. Moving through the ranks, he helped to grow the company delivering a visionary alternative from conventional fencing to one renowned to be technologically superior, intelligent and a fully integrated animal management system. This evolved into Gallagher security system's focus on intelligent access control and networked perimeter fencing that enable a Gallagher Command Centre to give complete control in regard to security in a turn-key manner with an ability to manage risk 24/7. The systems are flexible and scalable therefore as modular system in both size and functionality can change and adapt for security requirements, future proofing of a system as well as ensuring a positive return on investment. Today, Gallagher is still lead by Bill Junior, now Sir William Gallagher, who with his team continue to win awards and accolades for innovation and transformational products across their business. Mike Foley, Regional Manager for Africa has been with the Gallagher family for the past 19 years of which 11 years ago he introduced Gallagher to Nigeria. Mike has a vision for a turn-key security solution for Abia State.
